

WP CTL D Installation Guide

The Extron WP CTL D is a Decora style 1-gang wall plate which passes RS-232 control signals from a computer or control system, and IR signals from an IR source. Install it directly into the wall using a mud ring, or in a 1-gang junction box (not supplied), following the steps below.

- Using a mud ring or a junction box as a guide, mark the holes and cut out the material within the marked area.

NOTE *If installing a junction box, allow enough depth for the wall plate and cables. The box should be at least 2.0" (5.1 cm) deep to accommodate the connectors, plate, and cables.*

- Either
 - Insert the mud ring into the opening, rotate the dog legs, and secure with the screws provided, or
 - Insert the wall box and secure with 10-penny nails or screws.
- Run the RS-232 and IR signal cables behind the wall and thread them through the mud ring or wall box.

NOTE *Extron recommends using a good quality, low capacitance, shielded cable such as an Extron CTL or SPL Control cable.*

WP CTL D Installation Guide, cont'd

- Connect the IR cable to the rear panel IR connector by inserting the signal wire into the hole marked "S", and the ground wire into the hole marked "G" (see inset, step 4).

NOTE *The recommended driving distance from an MLC controller is 100 feet.*

- Connect the RS-232 cable to the rear panel RS-232 connector by inserting the ground wire into the hole marked "G", the transmit wire into the hole marked "Tx", and the receive wire into the hole marked "Rx" (see inset, step 5).

- Mount the device into the mud ring or wall box.
- Attach the supplied Decora faceplate.

NOTE *If applicable, repeat steps 1-7 to install additional wall plates.*

- Connect the RS-232 control device and/or IR input device to the front of the WP CTL D.
