

TeamWork® 601 and 601i Kits • Installation Guide

TeamWork 601 and 601i Kits

The TeamWork 601 and TeamWork 601i kits consist of an analog and digital video switcher, system controller, Cable Cubby®, and cables packaged together as a complete system that, in most cases, requires no configuration.

The diagram above shows a typical TeamWork 601 application. Digital or Analog input devices (laptops and a tablet) connect to the switcher, using "Show Me" cables. Analog video is digitized to HDMI output. The "Show Me" cables allow the user to select the active input on the switcher.

A control cable connects the RS-232 ports on the switcher and the system controller.

The system controller powers the display on and off. The system controller has been configured so that when a video signal is detected on any of the switcher inputs, the display is powered on. A 30 second timer is started when no signal is detected on any of the switcher inputs. If an active source is detected before the timer expires, the display remains on and the timer is reset. If 30 seconds pass without an active signal, the system controller powers off the display.

The TeamWork kits work, as described, without further software configuration. To change the behavior or operation of the system, configure the system controller (see the *IPL T PC1/IPL T PC1i User Guide* at www.extron.com).

TeamWork Kits • Installation Guide (Continued)

TeamWork 601 and TeamWork 601i Kits Included Parts

	TeamWork 601	TeamWork 601i
Video switcher	1 (MPS 601) 2 VGA and 4 HDMI inputs	1 (MPS 601) 2 VGA and 4 HDMI inputs
System controller	1 (IPL T PC1)	1 (IPL T PC1i)
Cable Cubby 1400	1	1
Power modules	2 US modules included (4 AC outlets total)	Sold separately
HDMI "Show Me" cables	4	4
VGA "Show Me" cables	2	2
HDMI cable	1	1
Switcher control cable	1	1
IEC C14 male power cord plug (see instructions below)		1
Installation Guide	TeamWork 601 and 601i Kits Installation Guide	

IEC C14 Male Power Cord Plug Installation

When using the IPL T PC1i system controller (International TeamWork kits), replace the power plug on the display with the provided IEC C14 male power cord plug. This plug has a maximum current rating of 10 A and a maximum voltage of 250 VAC.

WARNING: High Voltage. Failure to follow these instructions may result in serious injury.

AVERTISSEMENT : Haute tension. Le non-respect de ces instructions peut provoquer des blessures graves.

- Installation and service of the power cord plug must be performed by authorized personnel only.
- L'installation et l'entretien de la fiche du cordon d'alimentation doivent être effectués uniquement par le personnel autorisé.
- Observe the correct wire polarity.
- Respecter la polarité correcte des câbles.
- Disconnect the power from the display or any other device before you begin installation.
- Débranchez l'alimentation de l'appareil d'affichage ou de tout autre appareil avant de commencer l'installation.

NOTE: The power cord plug shown below is for illustration only. The plug provided may not look exactly the same.

1. Cut the existing plug from the power cord.
2. Remove a suitable amount of the outer sheath from the power cord. Individual wires should not extend from the back of the strain relief after the plug is installed.
3. Strip a suitable amount of the jacket from the three wires. There should be just enough bare metal to wrap around the screw in step 7.

4. Loosen the screw and remove the top plate.
5. If required, loosen the white plastic wire clamp.
6. Thread the cord through the strain relief.
7. Use a flat head screwdriver to secure the individual wires to the correct connector.

WARNING: Observe the correct wire polarity (see the diagram to the left).

AVERTISSEMENT : Respecter la polarité correcte des câbles (voir l'illustration à gauche).

8. Secure the wires by tightening the white plastic wire clamp.
9. Reattach the top plate and screw that were removed in step 4.

Display Requirements

The TeamWork system is designed to work with most brands and models of flat panel displays available worldwide. Test the display thoroughly prior to installation or mass deployment of TeamWork systems. For optimum performance, consider the following when selecting the displays for your TeamWork installation.

Power attributes — The system works by controlling AC power to the display. When the display is in the ON state with an HDMI input selected, it must be able to power back ON to the same HDMI input when AC power is disconnected and reconnected. If the display does not behave this way, use an alternate display. Alternatively, you may need to control the display a different way (for example RS-232, infrared, or via Ethernet) using a different type of Extron control processor.

Sleep mode — If the display has a Sleep Mode feature (sometimes called “auto sleep”), disable it. Many displays have an option to disable this within the menu settings.

Resolution — The TeamWork systems were designed for use with flat panels having an HDMI input connector and having a native resolution of 1080p. Many consumer and professional displays support 1080p natively.

Audio — Audio from source devices is supported in the TeamWork system by routing it as an embedded audio signal to the display for playback via integrated speakers. Most displays with HDMI inputs and integrated speakers work this way. Some professional or commercial grade displays do not have integrated speakers and will not support audio playback. Typically, source devices with HDMI output connectors embed audio onto the HDMI connector.

NOTES:

- Always check and test compatibility before installation. Some systems may require advanced configuration of the system controller and require the display to be controlled by RS-232, Ethernet, or Infrared.
- Some displays support a lockout of local buttons. Extron recommends that, after setup, user accessible controls are locked whenever possible. This ensures the display remains optimized for the TeamWork system.

Installation

Install the AC Power Modules in the Cable Cubby

Detailed instructions are in the *Cable Cubby Installation Guide*.

Extron recommends the layout shown to the right with the two power modules diagonally opposite each other and the cable connectivity brackets diagonally opposite each other.

Slide the power modules in position (1 in the figure below, right) and secure them with the provided #6-32 mounting screws and star washers (2).

WARNING: Risk of electric shock: To ensure good electric grounding, you must use the star washers with the screws.
AVERTISSEMENT : Risque de choc électrique: Afin d'assurer une mise à la terre correcte, vous devez fixer les modules d'alimentation au Cable Cubby à l'aide de vis et de rondelles en étoile.

Install the Cable Pass-through Modules and “Show Me” Cables

ATTENTION:

- The end with the button and LED connects to the input devices and must come out of the top of the Cable Cubby.
- Le bout avec le bouton et la LED se connecte aux appareils d'entrée et doit ressortir du haut du Cable Cubby.
- The end with the three-conductor pigtail connects to the switcher and must come out of the bottom of the Cable Cubby.
- Le bout avec le mini câble à trois conducteurs se connecte au sélecteur et doit ressortir du bas du Cable Cubby.

1. Insert cables through the connectivity bracket and into the grommet plate (3).
2. Secure the grommet plate to the connectivity bracket (4).
3. Plug any unused holes (5).
4. Insert the cable pass-through modules into the Cable Cubby from underneath and secure them in position with the provided #6-32 mounting screws and star washers.

NOTE: The diagrams on this page show how to install HDMI “Show Me” cables in the cable connectivity brackets. Install VGA or mini DisplayPort “Show Me” cables in exactly the same way.

Mounting and Placement of System Components

Decide where to install the TeamWork system and where the individual components will be placed.

- Place the Cable Cubby somewhere that provides easy access for as many users as possible. Ensure that there is ample space for cables under the table. Ensure that the edge on which the lid opens is correctly oriented.
- Place the system controller close to the display.
- Place the MPS 601 switcher close to the Cable Cubby.

Installing the Cable Cubby in the Table

Before cutting the table and installing the Cable Cubby, see the *Cable Cubby Installation Guide* (see www.extron.com).

ATTENTION:

- Ensure that the orientation of the cable cubby and the hole dimensions are correct before cutting the table.
- Assurez vous que la position du Cable Cubby et les dimensions du trou soient correctes avant de couper la table.
- After installation, secure the cables to avoid them becoming tangled (see the figure above).
- Après l'installation, sécurisez les câbles de façon à éviter qu'ils ne s'emmêlent (voir l'illustration au-dessus).

Cabling

- 1 Connect the "Show Me" cables to the source devices.
- 2 Connect the "Show Me" cables to the switcher.
- 3 Connect the switcher to the display.
- 4 Connect the display to the system controller.
- 5 Connect the system controller to the switcher.
- 6 Connect power to the switcher and system controller.

“Show Me” Cables

The Extron “Show Me” cables are for use with Extron TeamWork systems. They feature a Share button for remote input source selection and a control pigtail, which may be wired directly into Extron switchers with contact closure and tally outputs.

HDMI “Show Me” cable

VGA “Show Me” cable

Display Port “Show Me” cable

Mini Display Port “Show Me” cable

Connecting “Show Me” Cables

1. Connect the input end of the “Show Me” cable to the source device.
2. Connect the HDMI output to the Extron switcher.

3. Connect the black (Tally Out) and red (Contact In) pigtail wires as shown above. The number adjacent to the Tally Out and Contact pins must correspond to the video input on the switcher.
4. Press the **Share** button to switch the connected source to the main presentation display. Pressing the **Share** button creates a momentary contact closure, which triggers the switcher to select the connected source device. If a tally output is available, the button lights blue.

NOTES:

- The drain wire does not need to be wired to the switcher. The “Show Me” cables are grounded via the video connectors.
- Do not connect the “Show Me” cable to the +V pin on the Extron switcher.
- The source device provides the +5 VDC supply voltage needed to illuminate the **Share** button. If the source device does not supply this +5 VDC, the **Share** button will not illuminate. Some mobile devices do not provide the required voltage to light up the button.
- Digital “Show Me” cables support embedded audio and CEC signals.

TeamWork Kits • Installation Guide (Continued)

Connect the Switcher to the Display Device

Connect the switcher HDMI output to the HDMI input of the display device, using the provided cable. Do not use HDMI to DVI adapters. If necessary, see the user guide for the display device.

Connect the Display to the System Controller

Connect the power cord from the display device to the power output receptacle of the system controller. TeamWork systems work by controlling the AC power to the display.

ATTENTION:

- If you are using the IPL T PC1i (International TeamWork kits) you must replace the power plug on the display with the provided adapter (see page 2).
- Si vous utilisez le IPL T PC1i (Kits TeamWork International), vous devez remplacer la prise d'alimentation sur l'écran par l'adaptateur fourni (voir page 2).

Connect the System Controller to the Switcher

Connect the COM port of the system controller to the RS-232 port on the switcher with the provided control cable.

ATTENTION:

- The two ends of the RS-232 control cable are different. One has a 4-pole connector, the other has a 3-pole connector.
- Les deux terminaisons du câble de contrôle RS-232 sont différentes. L'une a un connecteur 4 pôles, l'autre a un connecteur 3 pôles.

Connect Power

The system controller uses an internal power supply. Connect the power cord to a wall outlet.

The TeamWork 601 systems use a switcher with a 12 VDC, 1 A power supply, which is provided with the switcher.

ATTENTION:

- Do not power on the MPS 601 switcher until you have read the Attention in the Power Supply section of the *MPS 601 User Guide*.
- Ne branchez pas le sélecteur MPA 601 avant d'avoir lu la mise en garde dans la section « sources d'alimentation » du *MPS 601 User Guide*.

Testing the System

The TeamWork system has been pre-configured so that, once all the connections are made and the devices are all powered on, there should be no need of further configuration for the system to work. To ensure that the system has been set up correctly, follow these steps:

1. Power on the equipment
 - Source devices
 - Switcher
 - System controller (IPL T PC1)
2. Press the **Power** button (❶) on the front panel of the system controller. The LED (❷) lights green when power is being supplied to the attached output device.
3. Turn on the display and confirm that the display is receiving power.
4. Go to the menu for the display and disable the Sleep Mode feature. If necessary, see the display user guide.
5. Press the power button on the power controller. Ensure the LED goes out and the display turns off.
6. Connect one of the “Show Me” cables to a video source, such as a laptop.
7. Press the “**Show Me**” button on that cable. If the source device is providing a video signal, the LED on the Show Me cable lights blue and the display automatically turns on.
8. Connect a second “Show Me” cable to a second video source.
9. Repeat step 7 to verify that the second source device is providing a video signal and it is the output signal from the switcher. When the button on the second “Show Me” cable is pressed, the LED lights blue and the LED on the first cable is switched off.
10. Disconnect all the “Show Me” cables from the source devices.
After about 30 seconds without an input signal, the display should turn off.
11. Connect a “Show Me” cable to a source device and press the “**Show Me**” button on that cable.
As soon as an active video signal is detected, the display should automatically turn on.

Troubleshooting

No Image on the Display:

Cause 1 — There is a problem with the source device:

Solution — Verify the source device is powered **on** and outputs an active signal.

Cause 2 — Cable connections are incorrect:

Solution — Verify the HDMI output cable from the switcher is connected to the current HDMI input of the display.

Cause 3 — Display is off:

Solution 1 — Verify the display is in the **on** state.

Solution 2 — The TeamWork system turns the display on and off by controlling the AC power. If the display has a Sleep Mode feature, disable this feature to prevent the display from accidentally powering **off**.

Cause 4 — The display has a problem:

Solution — Verify that the display functions correctly.

Cause 5 — The display cannot show video at the incoming resolution:

Solution — The EDID settings on the switcher may need to be changed. Refer to the *MPS 601 User Guide* (see www.extron.com) or contact an Extron Support representative at www.extron.com/company/contactus.aspx.

“Show Me” Button LEDs Stay Off When Pressed:

Cause 1 — The cable is not plugged into a source device that is producing an active video output signal:

Solution — Verify that the source device is on and producing an active signal.

Cause 2 — Contact or Tally wiring is incorrect:

Solution — See “[Show Me](#)” Cables (page 7) to ensure the contact and tally pins are correctly wired.

Cause 3 — The switcher is not powered on:

Solution — Verify that the switcher is powered **on**.

Cause 4 — Problem with “Show Me” cable:

Solution — Try connecting the video source to a different cable. If the second cable works correctly, there may be a problem with the “Show Me” cable. Contact an Extron Support representative at www.extron.com/company/contactus.aspx.

Cause 5 — Problem with Switcher:

Solution — If none of the cables work correctly, there may be a problem with the switcher. Contact an Extron Support representative at www.extron.com/company/contactus.aspx.

Cause 6 — The source device does not output +5V:

Solution — This is a problem with the source device. HDMI specifications require pin 18 to carry a +5V output and VGA specifications require pin 9 to carry a +5V output.

The Display Does Not Automatically Turn On:

Cause 1 — Incorrect wiring:

Solution — Verify that the RS-232 communication cable is connected properly between the IPLink controller and Extron switcher.

Cause 2 — There is no video signal present at “Show Me” cables:

Solution — Verify that an active signal is present at the input of any of the “Show Me” cables.

Cause 3 — IPLink configuration is missing or corrupted:

Solution — Contact an Extron Support representative at www.extron.com/company/contactus.aspx.

Cause 4 — Display power is out of sync:

Solution — The display is in standby mode. Turn on the display using the remote or the physical power button.

Cause 5 — Display has sleep mode enabled:

Solution — Go to the menu for the display and disable the sleep mode feature. Turn on the display using the remote or physical power button.

The Display Stays On and Never Turns Off:

Cause 1 — Video signal is present at “Show Me” cables:

Solution — Verify that no active signals are present at the inputs of any of the “Show Me” cables. The TeamWork system is designed to turn off the Display only when no video signals are present.
