

ACP 100

AUDIO CONTROL PANEL WITH 6 BUTTONS – 2-GANG US

The ACP 100 is a configurable audio control panel that interfaces with the DMP 128 Plus audio processors. It provides volume adjustments for mixing and zone control, plus preset or macro recall for room configuration. Multiple ACP Series control panels can be installed around a meeting space and linked together. Each panel can be used for independent control of a specific zone or to adjust audio settings for the entire combined space. The ACP 100 features six dual-colored backlit buttons for easy operation in low-light environments and a volume knob for smooth, precise volume adjustments. It can be configured easily using Extron DSP Configurator Software. The ACP 100 mounts in a two-gang junction box, and includes a removable faceplate.

- ▶ Fully customizable button panel integrates easily with an Extron DMP 128 Plus series audio DSP
- ▶ Six dual-color, customizable, backlit buttons and rotary volume control
- ▶ Two ACP ports allow for quick system expansion and upgrades
- ▶ Connects directly to the DMP 128 Plus - No control processor or external power required
- ▶ Use a single audio control panel or link up to eight panels to accommodate a variety of system designs
- ▶ Includes two-gang faceplate and mud ring
